

A large, stylized red flame graphic that occupies the left and center portions of the top half of the page. It has a jagged, organic shape with several peaks and valleys, rendered in a solid red color against a lighter red background.

Protecting people, buildings and the environment

PFC Corofil is one of the UK's leading manufacturers of passive fire protection products. Our products help maintain the safety of public, private, commercial and historic buildings worldwide. Trading since 1962, we have become a familiar and trusted brand for the UK construction industry. A family run company for many years, PFC Corofil was acquired in 2008 becoming part of the Encon Group of companies, which recognised the pedigree and quality of our products and the technical expertise of our team.

Our products are independently fire tested and are subject to a voluntary ongoing third-party certificate scheme which defines the scope of use, carries out factory audits and random fire tests to ensure that the highest standards of production are maintained. PFC Corofil has increasingly taken a more holistic outlook with respect to all technical enquiries, highlighting the fire resistance, acoustic and air tightness properties of our products.

PFC Corofil responds to meet the demands of an ever-changing construction industry. We aim to deliver top quality products at a competitive price, excellent customer service and most importantly, to give reassurance that the job is done correctly, first time.

SERVICE PENETRATIONS

PFC Corofil Intumescent Pillows

Intumescent Pillows can be used as a temporary or permanent firestop system where steel trunking and cable trays penetrate masonry walls.

-  Fire rated for up to 240 minutes.
